

Step 1: Getting published in the UK. What you're up against

Let's be honest. If you're reading a guide about how to get published, you already know it's not easy. But knowing something is difficult and understanding *why* it's difficult are two different things - and the second one is actually useful. So, **before we get into the solutions**, here's a brief, clear-eyed look at the landscape you'll be navigating.

The money problem

The headline figures are hard to ignore.

In 2022, a [large-scale survey](#) of 60,000 UK authors found that primary occupation authors - those who spend at least half their working time writing - had median self-employed writing earnings of **just £7,000 per year**, a fall of 38.2% in real terms since 2018.

Additionally, **the top 10% of authors take home roughly 47% of all writing income**, and men are typically earning 41% more than women.

Lastly, the number of authors who earn all of their income from writing had dropped from 40% in 2006 to just 19% by 2022. In other words, the full-time professional author is rare, and getting rarer.

Power is concentrated at the top

In 2024, the UK's Big Four publishers - *Penguin Random House*, *Hachette*, *HarperCollins* and *Pan Macmillan* - increased their [combined market share](#) to **nearly 50%**. PRH alone sold 26 titles worth more than £1million each in 2024. That's almost half the +£1million titles going to a single publisher.

For a debut author, this concentration matters. It shapes where marketing budgets go, which books booksellers push, and whose names and works appear at the front of shop displays.

Submission silence

The submission process is arguably the most demoralising experience for newcomers. The background research for this guide found widespread frustration among writers at every stage, with many reporting that the default response to a manuscript submission is simply... nothing. That's not unusual or a sign your work is especially bad; it's just shows how overstretched the industry is.

So why bother?

DON'T GIVE UP. People DO break through - and they're not all lottery winners. **The ones who succeed tend to understand the system rather than resent it.** They approach agents strategically, submit smartly, build readerships early, and treat writing as a craft *and* a career simultaneously.

Which is exactly what this guide will help you do.

Step 2: How to land a literary agent

Why you need an agent (and what they do)

For most aspiring authors, getting a literary agent isn't just a good idea. It's a must-have for traditional publication. Publishing houses like *HarperCollins* and *Penguin Random House* simply [don't accept](#)

[manuscripts](#) without an agent in tow, which means there's no way to contact them directly to get a publishing deal.

An agent is your **entry point** into the publishing world. They pitch your book to editors, negotiate your contract terms, manage rights (foreign, film, audio), and act as your advocate and sounding board throughout your career. The commission - typically

15% on domestic deals and 20% on international ones - comes out of what you earn, not your pocket upfront.

The good news is that agents are genuinely looking for new talent. The less-good news is that they're looking through a mountain of manuscripts to find it. Getting your submission noticed requires some preparation, some research, and an honest look at what the process actually involves.

One: Find the right agents

Before you submit to anyone, you need to build a tight agent shortlist. This means reaching out to warm possibilities, not generic, shot-gun submissions. The key resources for UK writers for this task include the *Writers' & Artists' Yearbook*, which provides comprehensive listings of UK literary agents, publishers and submission guidelines, and platforms like [QueryTracker](#) and [Manuscript Wishlist \(MSWL\)](#), which help you identify agents seeking specific types of stories and manage your submission tracking.

If an agent asks you to pay them to read your work, walk away.

The *Writers' & Artists' Yearbook* (published annually by [Bloomsbury](#)) is the UK's most trusted print reference for this.

QueryTracker is free to use and lets you filter agents by genre, track who you've submitted to, and read reports from other writers about response times.

MSWL is where agents publicly post what they're actively looking for right now - which is exactly the kind of intelligence that turns a decent submission into a well-targeted one.

Once you've found candidates, go deeper. Read their agency bios. Look at the authors they already represent. Check their social media - many agents are surprisingly candid on *X/Twitter* and *Instagram* about what excites them and what they're tired of seeing. An agent who has recently sold three quiet literary novels is a very different prospect to one whose list is full of high-concept thrillers, even if both say they're "open to fiction."

Each agent and agency will have particular [submission guidelines](#), and they may vary significantly. Most will ask for a cover letter, a synopsis, and the first three chapters or first 10,000–15,000 words. Some agencies have submission windows; outside those windows, your email may simply be deleted unread.

Always check the specific submission page on the agency's own website, not a third-party listing, which may be out of date.

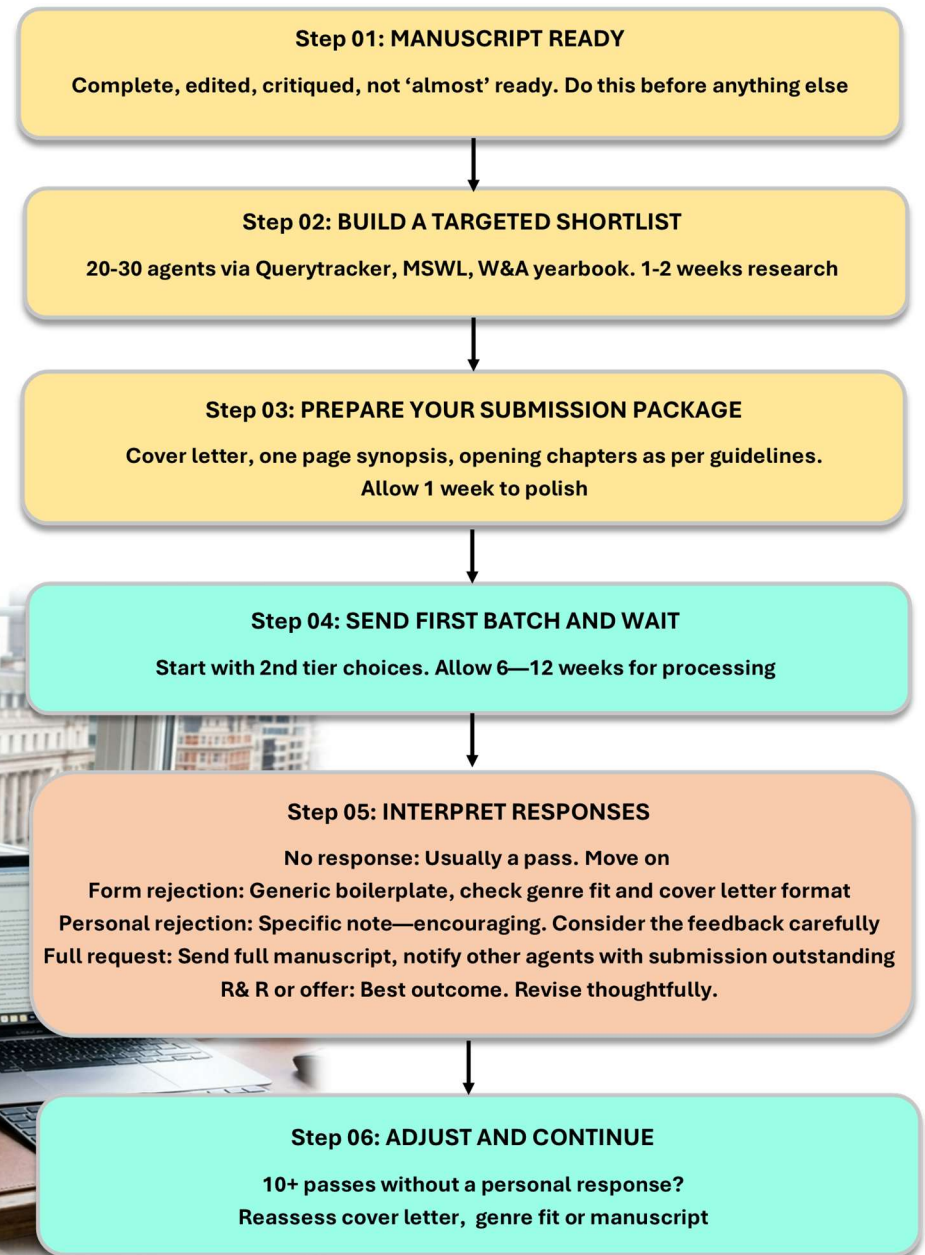

Two: Write a cover letter that does its job

The [cover letter](#) is **NOT** a summary of your book. It's a sales pitch. Its only job is to seduce the agent or editor into reading or requesting your work. Keep your letter to **one page** - around 300 to 400 words is best.

A strong cover letter has four working parts:

- **The personalised opening.** One or two sentences that show you've done your homework. Why this agent, specifically? Mention a book they represent that you admire, a recent interview where they mentioned what they're looking for, or a specific note from their *MSWL* post. This signals professionalism and separates you from the writers who mass-email 200 agents in one afternoon.
- **The hook.** Summarise your book in roughly 150 to 200 words. Think back-cover copy, not plot summary. Introduce your protagonist, establish the central conflict, and hint at what's at stake - without resolving anything. You want the agent turning to your first page, not feeling like they've already read the whole thing. Two **comparison titles** are sufficient, but they must be recent, (ideally published within the last three years), and chosen to show nuanced understanding of where your book sits in the market rather than flattering comparisons to bestselling household names.

- **The book details.** Title, genre, word count. For most novels, the minimum word count is around 50,000 words; if your count sits outside normal genre ranges, some agents recommend mentioning it at the end of the letter once you've already hooked them.
- **The bio.** Keep this brief and relevant. Writing credits, prizes, relevant professional experience. If you have nothing to list yet, that's fine - agents know that most slush pile submissions come from [first-time authors](#), and that's not a disqualifier in itself. Don't pad it with unrelated achievements. Don't apologise for being a debut writer.

Three: Understand the timeline (and don't let it derail you)

I know, the waiting is genuinely hard, but it is unavoidable. Just like film-making, publishing moves at glacial pace. If an agency doesn't specify submission response times on their website, a reasonable working assumption is **three months**. After that, a single polite follow-up email is appropriate. Keep it brief; one or two sentences, no guilt-tripping.

Simultaneous submissions are standard practice and generally accepted in the UK, as long as you're transparent if an agent asks. Avoid submitting to multiple agents within the same agency unless guidelines explicitly permit it. **Submit in batches of eight to twelve agents at a time**. This way, if you start receiving feedback or spotting patterns in rejections, you can adjust before exhausting your list.

One practical tip worth following: start with your second-tier choices, not your dream agents. Work out any kinks in your submission package before you approach the agents you most want to work with.

When following up, it's important to remember that **agents talk to each other**. Being rude or pushy to one agent can affect how others in the industry perceive you. Maintain professionalism throughout, even when you're frustrated. Especially when you're frustrated. The publishing world is far smaller than it looks.

What agents are actually looking for

Remember: An agent isn't just evaluating your manuscript; **they're evaluating whether they can sell it**. That means they're thinking about their existing relationships with editors, current market conditions, and whether your book has a clear commercial identity. Literary merit and commercial viability aren't the same thing, and understanding the difference matters.

Your initial submission needs to convey the flavour of your work - your unique voice and style - while simultaneously presenting as a set of professional documents that show you take this seriously. The manuscripts that get requests for full reads tend to have both: something distinctive about the writing, and a clear sense of what it is and who it's for.

Step 3: Writing a submission that actually gets read

The first five pages carry everything

You've addressed your cover letter to the right agent, personalised it properly, and hit send. Now comes the part most writers underestimate: what happens when an agent actually opens your manuscript.

The hard truth is that within a few pages a literary agent will decide whether to call in a full manuscript or not.

This isn't agents being lazy or brutal, it's simply the reality of reading hundreds of submissions a month.

Your opening pages carry the weight of the entire submission. They have a lot of work to do.

Agents are looking for engaging writing that feels vibrant and fresh, characters that compel curiosity even if they're not entirely likeable, and a sense that the author is in control of their story. Too much description and scene-setting at the start, where it's hard to get any sense of what might unfold, is one of the most common reasons a submission loses momentum before it's had a chance to build any.

A practical test: does your story actually start where you think it does? Many submissions benefit from cutting the

first chapter or more, so the story starts further in with less exposition to get bogged down in.

It's also worth considering whether scenes start at the latest possible point and end at the earliest. If your protagonist is still waking up, looking in a mirror, or thinking about their past on page one, you've almost certainly started too early.

A good first page must create intrigue - some question posed that the reader needs answered. That can relate to character, place or event. It doesn't have to be a dead body. Think of Daphne du Maurier's opening to *Rebecca*: "Last night I dreamt I went to Manderley again." Already the reader is curious, before a single plot point has occurred.

The synopsis: Not a blurb, not a plot dump

The [synopsis](#) is probably the most widely misunderstood document in the submission package. Writers often treat it as either back-cover marketing copy or a chapter-by-chapter breakdown.

It's neither.

The synopsis is a functional document. Its job is to show the agent that your story has a beginning, middle and end, that you understand narrative structure, that you can build to a climax, and that you know how to resolve it.

One [agent's approach](#) is to number one through ten down a page, put the first major event at the top and the ending at the bottom, fill in the major beats in between, flesh out into paragraphs - and that's your skeleton. It's not poetry. It just needs to be clear.

Common synopsis errors that trip people up:

First: You must [include the ending](#). Explain what happens. Don't make it vague. Agents need to see how the story resolves to assess whether it is effective and compelling.

Second: Keep the cast tight. [Don't include too many character names](#). A page cluttered with them becomes confusing and difficult to follow. Give us the protagonist, their core motivation, and the main conflict. Secondary characters only appear when they're essential to understanding what happens.

Third: Keep it [short](#). One page is enough. No literary agent worth their salt will object to a really good one-pager. And if you can't

summarise your story in a page, there's a reasonable chance something in the structure isn't working yet - the synopsis process is often how writers discover that.

Word count and genre: get these right before anything else

These two details feel administrative, but they're the first filter many agents apply.

Agents ask for the [word count](#) for a reason: if it's outside the accepted range for the genre, many will simply skip to the next query without reading the premise at all.

The broadly [accepted ranges](#) for debut fiction in the UK are:

- Literary and commercial fiction 80,000–110,000 words
- Crime and thrillers 70,000–100,000 words
- YA 50,000–80,000 words
- Fantasy 90,000–120,000 words (with more flexibility than most other genres)
- Middle grade 25,000–40,000 words.

A well-paced debut at 90,000 words is an easier sell than a sprawling 160,000-word epic - unless you're Tolkien, and you're not, and neither is anyone else submitting a first novel.

Genre framing is equally important. **Misidentifying your genre isn't just confusing, it means you've been targeting agents who**

don't represent it. If you're unsure, look at the books on your shelf that feel most similar to what you've written, check how booksellers and publishers categorise them, and use that language in your submission.

The personalisation signal that works

Agencies consistently note that they appreciate [thoughtful approaches](#) demonstrating an awareness of an agent's individual tastes and interests. One genuine sentence explaining *why you chose this agent specifically* - not flattery, but **specificity** - does more work than a perfectly structured cover letter that could have been sent to anyone.

Check what the agent has said in recent interviews. Look at their current client list. Read their *MSWL* posts. If there's a genuine alignment between what they've said they're looking for and what you've written, say so clearly. Specificity is what turns your submission from just one in a pile into something that lands.

The submission killers

- **Sending the same [cover letter](#) to every agent without personalisation.** Agents notice immediately when a cover letter has no specific reason for approaching them. It signals that you haven't done the research, and raises

questions about whether you'll be professional and attentive as a client.

- **Ignoring the [submission guidelines](#).** If an agency has specific instructions- a particular format, a specific word limit on sample chapters, a preference for submissions only during certain windows - not following them is putting yourself at a disadvantage before you've even been read.
- **Submitting before the manuscript is finished and fully edited.** It can be frustrating for an agent to request a full manuscript, only for the writer to explain it isn't ready yet. That's a missed opportunity that's very hard to recover with that agent.
- **Comparing yourself to Dickens, Rowling, or any other household name in your covering letter.** It signals a lack of perspective on where you currently sit in the market and makes agents nervous rather than excited.

Step 4: Getting useful feedback (not just silence)

Why you're hearing nothing

Silence after a submission isn't personal, it's structural. Most agents simply don't have the time to deliver feedback, which means you could be getting [standard rejections](#) with no idea why. The writers who make progress don't wait for the industry to explain itself. They [find feedback](#) through other channels.

Reading the rejections you do get

[Rejections aren't all equal](#). What they say can tell you a lot:

- **A form rejection** - phrases like "didn't resonate" or "not quite right for my list" - is boilerplate. These phrases sound personal but are still too general to be genuine feedback,

and reading specific meaning into them is likely to mislead you. They usually signal a genre mismatch or a query letter that didn't land, not a fundamental problem with the writing.

- **A semi-personal rejection** - one that mentions something specific about your work - is genuinely encouraging. A **revise and resubmit (R&R)** is even better. It means you're almost there, but the manuscript needs a bit more work. If you put that work in, the agent may reconsider, though resubmission doesn't guarantee a yes.

The pattern to pay attention to is **repetition**. If three different agents flag the same issue, that's not coincidence - that's a signal.

Paid assessment: The reputable options

If you genuinely can't tell what isn't working, a professional manuscript assessment is worth the investment.

The reputable UK services are [The Literary Consultancy \(TLC\)](#), which has been operating since 1996 and matches every manuscript to an editor suited to its genre and creative vision, providing a market-aware appraisal with practical developmental advice. [Jericho Writers](#) and [Curtis Brown Creative](#) both offer similar services, with editors drawn from publishing and agenting backgrounds.

Costs typically run from a few hundred pounds and upward for a full novel. No service should promise publication - and the reputable ones won't.

The free alternative

[Beta readers](#) and critique partners cost nothing and often deliver more useful feedback than a paid report, if you choose them well. Look for readers who are well-read in your genre, not friends who'll spare your feelings, but people who understand the conventions you're working with and whether you're meeting reader expectations. Find them through local writing groups, *Scribophile*, the *Absolute Write* forum, or genre-specific Facebook communities.

One rule above all:

Don't submit to agents until someone has read and critiqued your novel in its entirety. Getting [third-party feedback](#) to uncover issues you can't see in your own work is critical, and it will only strengthen your manuscript before it reaches a submission inbox.

Step 5: Improving a debut writer's chances

What publishers actually want from a first-timer

Talent gets you in the room. Commercial fit is what gets you a deal. Publishers are businesses, and debut authors are a risk, so the more you can reduce that perceived risk before you submit, the better your odds. There are three levers worth pulling: **publication credits, competitions, and platform.**

Publication credits that still matter

Short fiction isn't the commercial route it once was (more on that in Section 06), but publishing credits in respected literary magazines do carry weight as a signal of craft and professional seriousness.

Msexia's readership is itself a meaningful audience, and publication in the magazine is a credible credit for a debut writer building their submission profile. **Granta** is worth monitoring too — a placement in the magazine, particularly in one of their themed issues or their Best of Young British Novelists lists, has historically been a career-defining moment for literary fiction writers.

Competitions worth entering

[Novel competitions](#) are one of the most underused tools available to debut authors. You don't need to win. A longlist or shortlist is often enough to attract agent attention. Agents are always on the lookout for talent and will sometimes ask for more material from shortlisted or longlisted entrants, even without a win.

The competitions with the strongest track record in the UK include:

- the [Bath Novel Award](#) (open to unpublished and independently published novelists in all adult genres, with full manuscript feedback for shortlistees).

- The [Bridport Prize](#) (which has a novel category as well as short fiction).
- The **Curtis Brown/Women's Prize Discoveries** programme (free to enter, with the winner receiving £5,000 and representation by Curtis Brown).
- The [Penguin Michael Joseph Undiscovered Writers' Prize](#) which specifically targets authors from underrepresented backgrounds, offering a publishing contract worth at least £10,000 plus representation by Janklow & Nesbit, with all shortlisted writers receiving one-to-one editorial feedback.

Building an author presence before you're published

Agents and publishers increasingly factor in **author platform** - not just for non-fiction, where it's long been expected, but for commercial fiction too.

This doesn't mean you need a viral following. It means having a clear sense of who your readers are, some evidence that you've started finding them, and a professional web presence that makes you easy to discover.

The key principle: **give readers something before you ask for anything**. Share your writing process, your influences, your reading life.

Be a genuine participant in the literary community you want to join, not just a marketer of your own work.

Step 6: Do short stories still open doors?

The honest answer: Sort of

Short fiction as a commercial route into book publishing is largely gone. Most agents and publishers prioritise novel-length work, and a collection of brilliant short stories won't, on its own, translate into a novel deal. The fact is, [it's easier to get a novel published than a short story collection](#). **Agents typically avoid collections because they're difficult to sell to publishers unless the author is already well-known.**

However, this doesn't mean short stories are useless:

- What they can't do is replace the novel.
- What they can do is build the CV, sharpen the craft, and open doors to a specific kind of credibility.

Where short fiction still counts

Publication credits in respected outlets signal to agents that you take the work seriously and that editors have already backed your voice.

The UK venues worth targeting include [Mslexia](#), [The Stinging Fly](#), [Structo](#), and the [White Review](#), as well as competitions like the BBC National Short Story Award (for writers with an existing publication record) and the Bridport Prize.

Keep in mind that some of the most successful published authors have drawers full of unpublished short stories and manuscripts that never found a publisher - but no word is wasted, because they were honing their craft.

When to stop and write the novel

If you've been publishing short fiction for a few years and it hasn't generated meaningful agent interest for your longer work, it's a signal - not to stop writing short fiction, but to shift your primary submission energy to the novel.

Treat short stories as a craft training ground and a credibility builder. They're not, by themselves, a path to a book deal.

Step 7: Self-publishing done properly

The baseline reality

Self-publishing has never been more accessible - and never more crowded. The barriers to getting a book online are essentially zero, which is also why visibility is so hard to achieve. It's also a financial black hole. **The majority of self-published authors earn very little.** The ones who break out aren't lucky - they treat publishing as a business from day one.

The minimum professional standard

Before you think about marketing your book, get the product right. This means **professional editing, a professionally designed cover, and properly formatted files.** These aren't optional extras. Ensuring your book is discoverable means setting local UK pricing and providing clean, **complete metadata** - description, keywords, and correct categories - to boost both trade and online discoverability. A book with a homemade cover and no metadata strategy is invisible before it's even launched.

Which platform?

The two main platforms for UK self-publishers are **KDP** (Amazon's Kindle Direct Publishing) and **IngramSpark**. They serve different purposes and most serious indie authors use both. *The Alliance of Independent Authors* recommends simultaneously publishing

print-on-demand on both KDP Print for Amazon's ecosystem and IngramSpark for its global distribution to bookstores and libraries.

KDP gives you Amazon reach and up to 70% ebook royalties on books priced between £2.99–£9.99. IngramSpark gets your physical book into bookstore ordering systems. Without it, physical retail is essentially closed to you.

[Draft2Digital](#) is also worth considering for distributing ebooks on Apple Books, Kobo, and other platforms without managing each separately.

The discoverability problem

Getting published is the easy part. Getting found is the hard part. Your Amazon product page - the cover, description, keywords, and category choices - functions as your primary shop window. Get those wrong and no amount of social media will compensate.

Beyond the page itself, the tools that actually move books for self-published authors are:

- **ARC** (advance review copy) readers who post reviews before launch
- **A launch team** of engaged supporters who create noise on day one
- **Newsletter advertising platforms** like *BookBub* and *Written Word Media*
- And, or genre fiction especially - **Amazon Ads**.

Spotting vanity presses

One warning worth repeating: there is a significant difference between legitimate self-publishing platforms and vanity presses. Legitimate platforms cost nothing to upload to (KDP and IngramSpark are both free at the point of publication).

If a company is asking you for thousands of pounds to publish your book and promising distribution, that's a vanity press, not a self-publishing service.

The Alliance of Independent Authors maintains a watchdog list of recommended and non-recommended self-publishing services at selfpublishingadvice.org.

Suggested budget for self-publishing in the UK

	Budget tier: lean £600-900	Budget tier: standard £1,500-2,500 Recommended for debut	Budget tier: premium £4,000+
Service	Lean	Standard	Premium
Developmental editing	—	£500-900	£1,200-2,000
Copyediting / proofreading	£200-350	£350-600	£600-1,000
Cover design	£150-300	£300-600	£600-1,500
Interior formatting	£80-150	£150-250	£250-400
ISBNs (Nielsen UK)	£89	£164	£164
Launch marketing	£100-200	£300-600	£600-2,000+

Step 8: Building a readership before you approach anyone

Why platform matters earlier than you think

Agents and publishers increasingly look at **author platform** as a signal of commercial viability - not as a substitute for good writing, but as evidence that the work might find an audience. And if you're self-publishing, platform is everything.

You don't need a viral following, just a small, genuinely engaged audience and the beginnings of a direct relationship with readers.

Newsletter over social media

The single most durable thing you can build is an email list. Social platforms change, algorithms shift, and followers you've built over years can become invisible overnight. **An email list is yours.** A [newsletter](#) allows you to communicate directly with readers who are already interested in your work. This means sharing updates about your writing progress, new releases, and special offers and it gives you more control over your audience than relying on social media platforms, where algorithms can limit your reach.

For new and unpublished authors, **Substack** can be a useful tool for building your profile while your book is out on submission to agents and editors. In some cases, editors and publishers have approached authors directly after discovering them on the [platform](#). However, as shown below, Substack also has problems to overcome.

The truth about Substack

Starting out on Substack sounds straightforward — but the reality? It's a grind. Here are the main hurdles new writers face:

Discoverability is brutal. Substack's biggest weakness for new writers is discoverability - content from large accounts with thousands of followers dominates. Without an existing audience, growth is genuinely tough.

Spam suspensions hit out of nowhere. Writers have been suspended after publishing their very first post, with no clear explanation of what triggered it. And when it happens, your subscriber list gets hidden, appeal responses take 40+ hours, and accounts are sometimes flagged incorrectly.

Converting readers costs. On average, only 5.7% of free subscribers convert to paid - meaning you'd need 175 free readers just to land 10 paying customers.

BookTok and Bookstagram

These platforms can accelerate discovery, especially for genre fiction. With over 200 billion views on #BookTok, it is currently the most influential organic discovery platform available, working particularly well for romance, fantasy, thriller, and YA. But viral success is not a strategy. The [principle that consistently works](#) is the **80/20 rule**: 80% community content, 20% promotion. Show up as a reader and a participant in the literary world first. **Build trust before you ask for anything.**

Step 9: What can you earn?

The writer's Advance

The first thing most writers want to know when they get a book deal is: how much? **The honest answer for UK debut authors is that most advances are modest.**

On average, [the advance for a debut author](#) in the UK ranges between £1,000 and £10,000, fluctuating based on genre, publisher size, and market appeal. Commercial fiction and thrillers tend toward the top of that range; literary fiction and niche non-fiction sit lower.

The six-figure deals you read about in *The Bookseller* are real but genuinely rare, and planning a career around them is not a strategy.

Advances are also [paid in instalments](#) - typically a third on signing, a third on manuscript delivery, and a third on publication. That means the final payment may come two years after signing, making other income streams essential for debut authors relying on this money.

The earn-out problem

Keep in mind that an advance is not a bonus, it's an [advance](#) against future royalties.

On a paperback priced at £8.99 with a 10% royalty, an [author earns approximately 90p per copy](#). After earning out a £5,000 advance,

they will need to sell roughly 5,556 copies before any additional royalty income arrives.

Industry data suggests only around 25% of books earn out their advances. That doesn't mean failure. Publishers can still profit from backlist sales, and it establishes your credibility for future deals. But it does mean most debut authors won't see royalty cheques beyond the initial payment.

How the long game works

The proportion of authors who earn all their income from writing has [dropped](#) from 40% in 2006 to just 19% in 2022.

For most writers, especially early in a career, writing income is supplemented by teaching, workshops, speaking, journalism, editing, or other creative work.

Once again, this isn't failure, it's the reality for the vast majority of professional authors at every stage. The writers who build sustainable careers tend to treat the first book as a **credential**, not a salary, and diversify from there.

What your income could look like across a decade

Step 10: The realistic path forwards

The UK publishing industry is genuinely difficult. But it is navigable and this guide has tried to show you how.

The writers who make it tend to share a few things in common: They understand the market they're writing for. They submit strategically rather than hopefully. They seek honest feedback before they send anything out. They build a readership while they're still writing. And they treat writing as a long-term career rather than a single high-stakes bet.

The controllables - craft, research, persistence, platform, and realistic expectations - matter far more than luck, though luck plays its role too. The key thing is to focus on what you can actually change.

For ongoing guidance, the most reliable UK resources are:

- The **Society of Authors** ([societyofauthors.org](https://www.societyofauthors.org))
- **Jericho Writers** ([jerichowriters.com](https://www.jerichowriters.com)),
- **Reedsy** ([reedsy.com](https://www.reedsy.com))
- **QueryTracker** ([querytracker.net](https://www.querytracker.net))
- The **Alliance of Independent Authors** ([selfpublishingadvice.org](https://www.selfpublishingadvice.org)).

Now go and write that book.

About Chris Godfrey

Chris is a professional writer with more than 35 years' experience as a freelance creative. Currently, he is the founder of **Freelance Words** – a marketing hub, **Thrilla Films** – a showcase for scripts for TV and Film, and the forthcoming **Darkhouse** – a digital magazine for new and emerging writers due for launch in Q4 2026.

Chris has been active in the UK advertising industry since the 1980's, working for clients as varied as *British Airways*, *Rothman's Tobacco*, *Pirelli Tyres*, *Fred Perry sportswear*, *Ford Motor Co*, *Wells Fargo Bank* and more. He also worked in the publishing industry as a freelance editor, and was the CEO of White Knuckle Films, a Los Angeles-based content producer to the major studios, TV networks and streamers.
